### **Restriction Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28, drawn to a color image process system, classified in class 358, subclass 1.15.
- II. Claims 29-31, drawn to a plurality of color image processing systems over a network, classified in class 358, subclass 500.
- III. Claims 32-59, drawn to a color image processing system over a client system and a client server, classified in class 709, subclass 230.

The inventions are distinct, each from the other because: Inventions 1 and 2 are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a single image processing system does not require it to be used in consortium or in combination with a network of other systems in order to be functional.

Art Unit: 2626

The subcombination has separate utility such as without use over a network in an intranet environment.

The inventions of groups 1 and 2 are distinct from group 3 in that neither of groups one and two require utilization with a client server in order to function.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
